

CORN HYBRID FACT SHEET

1124

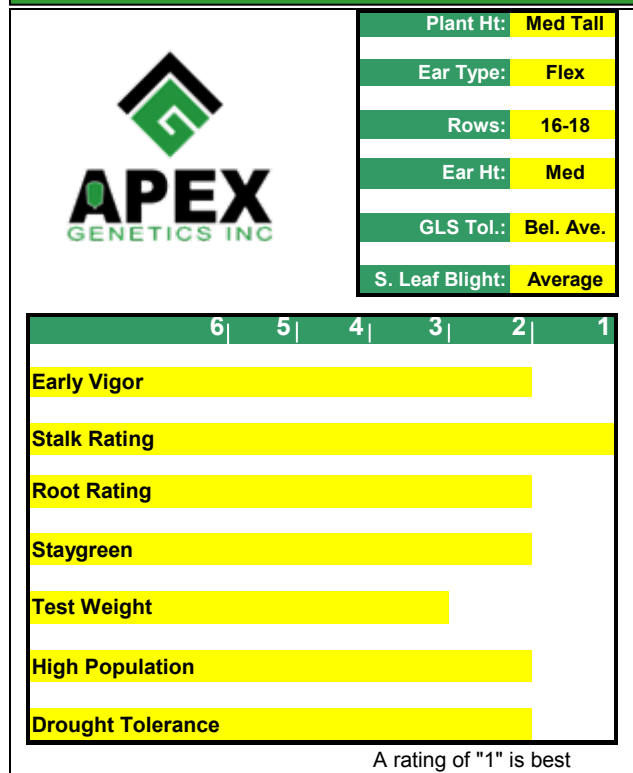

Conventional

*Possibly NOT available FY2006-07.
Did NOT produce.*

General Info & Comments

- 111-Day Relative Maturity (RM)
- High yield potential
- Goods stalks and ear retention
- Good yielding package with good drydown
- Known for consistency on irrigated sand and hills

Ratings Charts

Agronomic Notes:

- Excellent conventional choice for refuge acres.
- Has good stress tolerance. Very good choice on sandier soils, irrigated sand and dryland hills.
- Has good dual purpose potential as both a grain and silage option.
- Excellent stalks and good roots supports higher populations and maximizes its yield potential.
- GLS rating is below average, denoting that this is not a good option for corn-on-corn rotations.
